

# Using Silomail on Windows 8

Unfortunately Microsoft did not design Windows 8's Mail app to support POP based email (like your Silomail.com account). Fortunately there are a couple of options when it comes to choosing a work-around.

## **Option 1: Install Mozilla Thunderbird**

Mozilla Thunderbird is a free email client available for use on your Windows 8 computer, and yes, it does support POP email accounts. It is available for download at <http://www.mozilla.org/en-US/thunderbird/>

A PDF file with step-by-step setup instructions for Thunderbird is available from the support page of our website (where you found this document).

## **Option 2: Linking your Silomail.com account to a Gmail account**

If you have a Gmail email address you can set it up to act as a mail client to send and receive mail for your Silomail.com account. One bonus to choosing this option is the ability to access your Silomail.com email from any computer, anywhere in the world. If you don't have a Gmail account but would like to use this option you can sign up for a free account by visiting <http://Gmail.com>.

A PDF file with step-by-step setup instructions for Gmail integration is available from the support page of our website (where you found this document).
